		he field or has a mean uplift resistance of at least 182 psf.					
	✓	Reinforced Concrete Roof Deck.					
		E. Other:					
		E. Unknown or unidentified.					
		G. No attic access.					
↓.		f to Wall Attachment: What is the WEAKEST roof to wall connection? (Do not include attachment of hip/valley jacks in 5 feet of the inside or outside corner of the roof in determination of WEAKEST type)					
		A. Toe Nails					
		☐ Truss/rafter anchored to top plate of wall using nails driven at an angle through the truss/rafter and attached to the top plate of the wall, or					
		☐ Metal connectors that do not meet the minimal conditions or requirements of B, C, or D					
	Mi	imal conditions to qualify for categories B, C, or D. All visible metal connectors are:					
		☐ Secured to truss/rafter with a minimum of three (3) nails, <b>and</b>					
		Attached to the wall top plate of the wall framing, or embedded in the bond beam, with less than a 1/2" gap from the blocking or truss/rafter <b>and</b> blocked no more than 1.5" of the truss/rafter, <b>and</b> free of visible severe corrosion.					
		B. Clips					
		$\square$ Metal connectors that do not wrap over the top of the truss/rafter, <b>or</b>					
		☐ Metal connectors with a minimum of 1 strap that wraps over the top of the truss/rafter and does not meet the nail position requirements of C or D, but is secured with a minimum of 3 nails.					
		C. Single Wraps					
		Metal connectors consisting of a single strap that wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the front side and a minimum of 1 nail on the opposing side.					
		D. Double Wraps					
		☐ Metal Connectors consisting of 2 separate straps that are attached to the wall frame, or embedded in the bond beam, on either side of the truss/rafter where each strap wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the front side, and a minimum of 1 nail on the opposing side, or					
		Metal connectors consisting of a single strap that wraps over the top of the truss/rafter, is secured to the wall or both sides, and is secured to the top plate with a minimum of three nails on each side.					
	<b>~</b>	E. Structural Anchor bolts structurally connected or reinforced concrete roof.					
		F. Other					
		G. Unknown or unidentified					
		H. No attic access					
5.	. Roof Geometry: What is the roof shape? (Do not consider roofs of porches or carports that are attached only to the fascia or wall of the host structure over unenclosed space in the determination of roof perimeter or roof area for roof geometry						
	cias	ification).					
		A. Hip Roof Hip roof with no other roof shapes greater than 10% of the total roof system perimeter.  Total length of non-hip features:feet; Total roof system perimeter:feet					
		B. Flat Roof Roof on a building with 5 or more units where at least 90% of the main roof area has a roof slope of less than 2:12. Roof area with slope less than 2:12					
	$\checkmark$	C. Other Roof Any roof that does not qualify as either (A) or (B) above.					
ó.	Sec	ndary Water Resistance (SWR): (standard underlayments or hot-mopped felts do not qualify as an SWR)					
		A. SWR (also called Sealed Roof Deck) Self-adhering polymer modified-bitumen roofing underlayment applied directly to the sheathing or foam adhesive SWR barrier (not foamed-on insulation) applied as a supplemental means to protect the dwelling from water intrusion in the event of roof covering loss.					
		B. No SWR.					
	C. Unknown or undetermined.

7. <u>Opening Protection</u>: What is the <u>weakest</u> form of wind borne debris protection installed on the structure? **First**, use the table to determine the weakest form of protection for each category of opening. **Second**, (a) check one answer below (A, B, C, N, or X) based upon the lowest protection level for ALL Glazed openings **and** (b) check the protection level for all Non-Glazed openings (.1, .2, or .3) as applicable.

Opening Protection Level Chart  Place an "X" in each row to identify all forms of protection in use for each opening type. Check only one answer below (A thru X), based on the weakest form of protection (lowest row) for any of the Glazed openings and indicate the weakest form of protection (lowest row) for Non-Glazed openings.			Glazed Openings			
			Skylights	Glass Block	Entry Doors	Garage Doors
Not Applicable□ there are no openings of this type on the structure		X	X	X		X
Verified cyclic pressure & large missile (9-lb for windows doors/4.5 lb for skylights)						
Verified cyclic pressure & large missile (4-8 lb for windows doors/2 lb for skylights)						
Verified plywood/OSB meeting Table 1609.1.2 of the FBC 2007						
Verified Non-Glazed Entry or Garage doors indicating compliance with ASTM E 330, ANSI/DASMA 108, or PA/TAS 202 for wind pressure resistance						
Opening Protection products that appear to be A or B but are not verified						
Other protective coverings that cannot be identified as A, B, or C						
No Windborne Debris Protection	X				X
